TechMahindra Professional Experience

Project Name	: H3GParentProject-EAI Operations
Client	: THREE
Organization	: TechMahindra, INDIA
Role	: Back Office EAI Engineer
Technologies used	: Tibco BW, Python, JavaScript, HTML, Unix Shell Scripting

Project Description:

Worked on H3G-EAI Operations Project as a Back office Engineer. EAI is an intercommunication between enterprise applications, such as customer relations management (CRM), Provisioning and Billing etc. EAI links enterprise applications to simplify and automate business processes without applying excessive application or data structure changes. We used Tibco BW (Business works) as a middleware technology in our project.

Contribution:

- Joined as a Front office support in the project and promoted to Back Office within two months.
- Worked on automation of many processes using Python scripts and shell scripts.
- Worked on BW5 Deployments for different applications which resides on EAI layer.
- Participated in client meetings on a daily basis and provide the risk analysis for the changes to be planned and coordinate with the development team for the changes to be deployed at production without any issues.
- Worked on P1 and P2 issues and provided resolution without breaching of SLA time.
- Manages the dashboard for the applications and configured the alerts related to the different applications which helps in identifying the issue earlier and to mitigate the impact.
- Built the graphs related to the different applications using the HTML, JavaScript, and JQuery.
- Prepared SOPs for different application issues which I came across and shared knowledge to other team members regarding the issues.
- Extensively Participated in many GO Live activities of the project and involved in testing the functionality at our end.
- Immense knowledge in troubleshooting the application issues technically and functionally as well.
- Extensively worked on support activities with incidents and configuration with change requests and development requests.
- Worked on decommissioning of the applications after confirmation from the business and initiated the process of decommissioning of applications by attending meetings with different teams with no impact.

Project Name	: MDM Consultancy
Client	: VODAFONE
Organization	: TechMahindra, INDIA
Role	: Junior Developer
Technologies and Servers used	: JavaScript, JQUERY, HTML5, CSS, Ajax

Contact: +91-8142799790

Email: sravanmandava8@gmail.com

Project Description:

Worked on Vodafone MDM Consultancy Project as a junior developer. MDM Consultancy is a development project for building a web application using spring framework. This project provides a consolidated source of key master data on customers, products, and relationships between master data entities.

Contribution:

- Developed various Front-end screens related to the application flows using HTML, CSS, and JavaScript.
- Writing robust code for integrating controller to front end using AJAX, JavaScript and JQuery
- Implementing the code under the guidance of senior developer according to the requirements.
- Participated in meetings for the requirement gatherings for the better understanding of the requirements.
- Participated in daily scrum calls to discuss the progress of the work and completed the work in time.
